PHILADELPHIA:

PUBLISHED BY E. H. BUTLER & CO.

FOR SALE BY BOOKSELLERS THROUGHOUT THE UNITED STATES.

1860.

Entered, according to act of Congress, in the year 1852, by S. Augustus Mitchell, in the Clerk's Office of the District Court of the Eastern District of Pennsylvania.

## GEOGRAPHICAL AND STATISTICAL TABLES---NO. I.

## SURFACE OF THE EARTH.

The surface of the earth consists of unequal portions of land and water; the area of the former to that of the latter being nearly as 1 to 3. The land in the Northern Hemisphere greatly predominates over that in the Southern; if we consider the whole to be divided into 130 equal parts, that in the first will be represented by 78 such parts, and that in the other by 22.

The solid portions of the earth's surface consist of a number of detached sections, or islands, each being surrounded by water. The two larger masses are, for the sake of distinction, termed Continents; of which, one is the Eastern, and the other the Western. If the whole were divided as before into 100 equal parts, the two continents would be represented by 82 parts, and the islands by 18; or, in other words, the continental portion is about  $\frac{1}{2}$  times more extensive than the insular.

The terms Eastern and Western, in this case, refer to Ferro, one of the Canary Islands, and the westernmost land known to the ancients. Immediately after the discovery of America, the geographers of that age, in compiling their maps of the world, adopted the meridian of Ferro as the line of separation between the Eastern and Western Hemispheres. Ferro was then believed to be in longitude  $20^{\circ}$  west from Greenwich; but it is now known to lie some distance eastward of that meridian.

## PRINCIPAL ISLANDS.

AMERICA.	Square miles.	ASIA---Continued.	Square miles.

Kiusiu.....	23,300	Mindanao.....	35,000
Skokf.....	21,200	Van Diemen's Land.....	28,000
		Hawaii.....	4,000

## MOUNTAINS.

Mountains are classed according to their height in feet above the level of the sea. Those of the lowest class rank from 2,000 to 10,000 feet; those of the second, from 10,000 to 20,000; and those of the first class, from 20,000 upwards. Elevations under 2,000 feet are commonly denominated hills.

For many years, Mount Dhawalageri, one of the Himalaya range, was regarded as the culminating point of the globe; but, in the year 1854, Mount Everest, an adjacent peak, was ascertained to be 1100 feet higher. Chimborazo was long considered the loftiest peak of the Andes; but in 1838, Sorato and Illimani, in Bolivia, were measured, and reported to be several thousand feet higher. Subsequently, however, it was found that an error in computing their elevation, greater than the alleged difference, was committed. Aconcagua, a volcano in the Chilean Andes, is now regarded as the most elevated point of land on the Western Continent.

The snow line, or line of perpetual congelation on mountains, is that part of the surface where the temperature is always at the freezing point; here the snow commences, and envelopes all the upper portion in a continual wintry covering. Under the Equator, the snow line is estimated at from 15,750 to 16,000 feet above the level of the sea; thence towards either pole, it gradually descends until it reaches the surface of the earth, which, in the Northern Hemisphere, occurs at about latitude  $60^{\circ}$ , and in the Southern at a somewhat lower parallel. The snow line is not in all cases uniform; it differs considerably, from local causes, in equal latitudes, and even on opposite sides of the same range of mountains. In latitude  $20^{\circ}$  it is estimated at about 12,000, in  $40^{\circ}$  at 9000, and in  $60^{\circ}$  at 5000 feet above the level of the sea.

## Heights of the principal Mountains in the World.

NORTH AMERICA.	Feet.
Mount St. Elias, Russian America.....	17,860
Poconapatet, Mexico.....	17,735
Mount Brown, Rocky Mountains.....	16,000
Sierra Nevada, or Snowy Range of California.....	15,500
Mount Hood, Oregon Territory.....	13,861
Frémont's Peak, Rocky Mountains.....	13,470
Long's Peak, do.....	12,500
Chao Mountains, Hayti.....	8,600
Sierra del Cobre, Cuba.....	7,200
Black Mountain, highest of the Blue Ridge, North Carolina.....	6,470
Mt. Washington, White Mountains, New Hampshire.....	6,234
Mount Tahawus, or Marcy, New York.....	5,300
SOUTH AMERICA.	
Aconcagua, Chili.....	23,100

Mount Otahette, Georgian Isles.....	10,250
Mount Kosciuszko, New South Wales.....	6,500
Mount Humboldt, Van Diemen's Land.....	5,520

## VOLCANOES.

Volcanoes are mountains that are connected with the internal fires evidently existing beneath the surface of the earth, and to which they serve as chimneys, or vents. They are found in every quarter of the globe, from the island of Jan Mayen, in the extremity of the Northern Hemisphere, to Victoria Land, only  $12^{\circ}$  of latitude distant from the South Pole. Until recently, Volcanoes were supposed to exist only in the immediate vicinity of the Ocean; but it is now ascertained that there are several in the very centre of Asia, 1500 miles distant from any part of the sea. The number at present known is 427, of which 270 are active. In America there are 173 volcanoes, in Oceania 163, in Asia 67, in Africa 17, in Europe 5, and in Victoria Land 2.

## PRINCIPAL ACTIVE VOLCANOES.

	Feet.
Gualatieri, Peru.....	21,997
Arequipa, or Gagua Putina, Peru.....	20,320
Antisana, Ecuador.....	19,140
Cotopaxi, Ecuador.....	18,887
Pichincha, Ecuador.....	16,000
Klitchewskaja, Kamtschatka.....	16,763
Volcan de Fuego, Central America.....	14,000
Mauna Kea, Hawaii, Sandwich Islands.....	13,953
St. Helen's, Oregon.....	13,800
Indrapura, Sumatra.....	12,300
Peak of Tenerife, Canary Islands.....	12,182
Errebus, Victoria Land.....	12,400
Cartago, Central America.....	11,480
Etna, Sicily.....	10,874
Hecla, Iceland.....	5,110
Souffriere, Guadeloupe.....	5,108
Jorullo, Mexico.....	4,205
Vesuvius, Naples.....	3,948

## THE OCEAN.

The Sea, or Ocean, is estimated to extend over a space of 150 million square miles, or three-fourths of the surface of the earth. The different parts are distinguished by different names; the most important being the Atlantic, Pacific, Indian, Arctic, and Antarctic Oceans. There are also various inland Seas, Bays, and Gulfs, of considerable extent; as the Mediterranean, Baltic, Caribbean and China Seas, the Gulf of Mexico, Hudson's Bay, the Bay of Bengal, &c. These are regarded as portions of the oceans with which they are connected.

The Pacific Ocean is that area of water bounded by America on the one side, and Asia and Australia on the other. Measured on the equator, it extends east and west 160 degrees of longitude, or about 11,000 miles, varying materially in width in other quarters. From north to south it occupies 126 degrees of latitude, reckoned from about the 60th parallel south to the 60th north, or about 8,700 miles, and has an area estimated at eighty-three million square miles.

The Atlantic Ocean occupies the space between Europe and North America, and Africa and South America, with about the same extent north and south as the Pacific. It is more than a third as large as the Pacific, the area being reckoned at 30 million square miles. Both these oceans are divided by the Equator into Northern and Southern.

The Indian Ocean extends from Africa to Australia, and from the shores of Asia southward to a line supposed to be drawn from the Cape of Good Hope to the southern extremity of Van Diemen's land. It is about one-fourth the size of the Pacific Ocean, having an area of 21 million square miles.

The Arctic or Northern Ocean includes the basin extending around the North Pole. The Antarctic or Southern Ocean comprises the tract of sea lying around the South Pole, and southward of the Atlantic, Pacific and Indian Oceans. The Arctic and Antarctic Oceans contain together about a ninth part of the waters on the globe; the first has an area of three million, and the other of thirteen million square miles.

## LAKES.

Lakes are found in all quarters of the globe, but are more numerous in North America than elsewhere. The water of lakes is generally fresh; in a few instances it is salt, but varying in degree, being some-

times only slightly saline, or brackish. The Caspian and Aral, with some other lakes, are usually called seas, from their superior dimensions, and from their waters being salt, like those of the ocean. In elevation and depression of level, also, lakes differ essentially. Among those remarkable for elevation of surface, are Lake Superior, 600 feet; the Lake of Brienz, 1,900; the Great Salt Lake, 4,200; and Lake Titicaca, 12,795 feet above the level of the sea. Among the most conspicuous of the depressed or sunken lakes, are the Caspian, Aral, and Dead Seas; the two former being sunk to the depth of about 83 or 84 feet each, and the latter to the depth of 1312 feet, below the level of the Mediterranean.

Salt lakes have no outlet to the ocean; and, though they all receive fresh-water streams, yet, from the constant solar evaporation, their waters remain unchanged.

## ESTIMATED AREAS OF SOME OF THE PRINCIPAL LAKES.

	Sq. miles.		Sq. miles.
Caspian Sea.....	145,000	Lake Erie.....	7,800
Sea of Aral.....	30,000	Lake Ontario.....	6,900
Lake Superior.....	31,500	Lake Winnipeg.....	6,500
Lake Michigan.....	23,150	Lake Ladoga.....	6,190
Lake Huron.....	23,100	Lake Nicaragua.....	4,000
Lake Baikal.....	14,000	Lake Titicaca.....	4,000
Great Slave Lake.....	11,800	Great Salt Lake.....	1,875

## RIVERS.

Rivers may be classed either according to their length of course, or according to the extent of country drained by their waters. Regarded in the first point of view, the Mississippi, including its principal tributary, holds the highest rank; but if according to the second, the Amazon takes decided precedence of all other streams.

From the head of the Missouri, which rises on the east side of the Rocky Mountains, to the Balize at the mouth of the Mississippi, the entire stream, measured so as to include all its windings, is, according to one account, 4350, and, by another, about 4100 miles. But if estimated by the length of its valley, omitting all except the chief bends, the extent is not less than 2600 miles; being, in either case, the longest river in the world. The Amazon in South America, and the Ob in Asia, each water valleys about 2500 miles in length, estimated so as to exclude the smaller windings. The basin or region drained by the Amazon and its tributaries, being the entire region enclosed by a line connecting the sources of all its branches, is estimated at 2,100,000 square miles, a tract of country equal to two-thirds the extent of Europe. The Ob, estimated in the same manner, drains a basin of 1,250,000 square miles; and the Mississippi and Missouri, a basin of 1,100,000 square miles in extent.

#### RECENT ANTARCTIC DISCOVERIES.

UNTIL the year 1819, no land was known to exist to the southward of the 60th deg. of south latitude. In that year, South Shetland, in 1821 South Orkney, in 1831 Enderby's Land, in the year following Graham's Land, and in 1839 Sabrina Land, and the Balleny Islands, were all discovered by British navigators. In 1821, the islands of Alexander I. and Peter I., were discovered by the Russians.

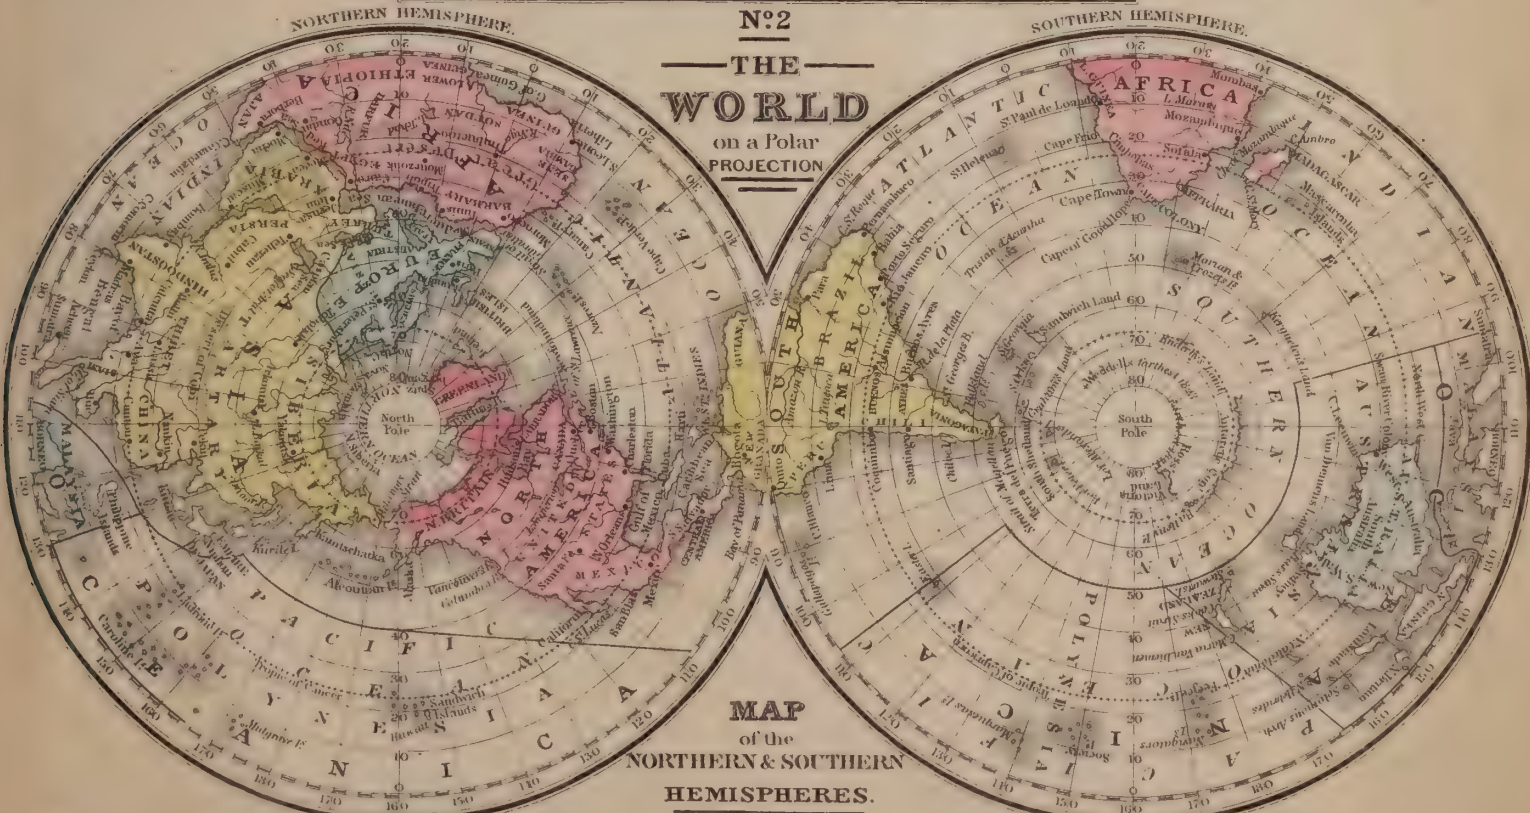

In August 1838, the U. S. Exploring Expedition, consisting of the Vincennes, Peacock, and some smaller vessels, under the command of Lieutenant Charles Wilkes, sailed from Norfolk. On the 19th of January, 1840, a continent, situate about 2,000 miles south of Australia, was discovered by the expedition, and explored for a distance of 1,700 miles from East to West, com-

prising the greatest extent of land yet discovered in this quarter. On the same day, a part of the same coast was seen by Commodore D'Urville, with the French Exploring Corvettes, Astrolabe and Zelee.

In 1841, Captain J. C. Ross, commanding the British ships Erebus and Terror, discovered and explored a line of coast, extending southward to within 830 miles of the South Pole, being the nearest approach yet made to that point of the globe.

All these regions are barren and desolate, and without inhabitants: the land is all the time covered with ice and snow, and the coasts are for the most part bordered with vast masses of ice. Mount Erebus, near the most southern point reached by Capt. Ross, is an active Volcano, 12,400 feet high. Mount Terror, in the vicinity, is 12,000 feet, and Freeman's Peak, in one of the Balleny Islands, is about the same altitude.

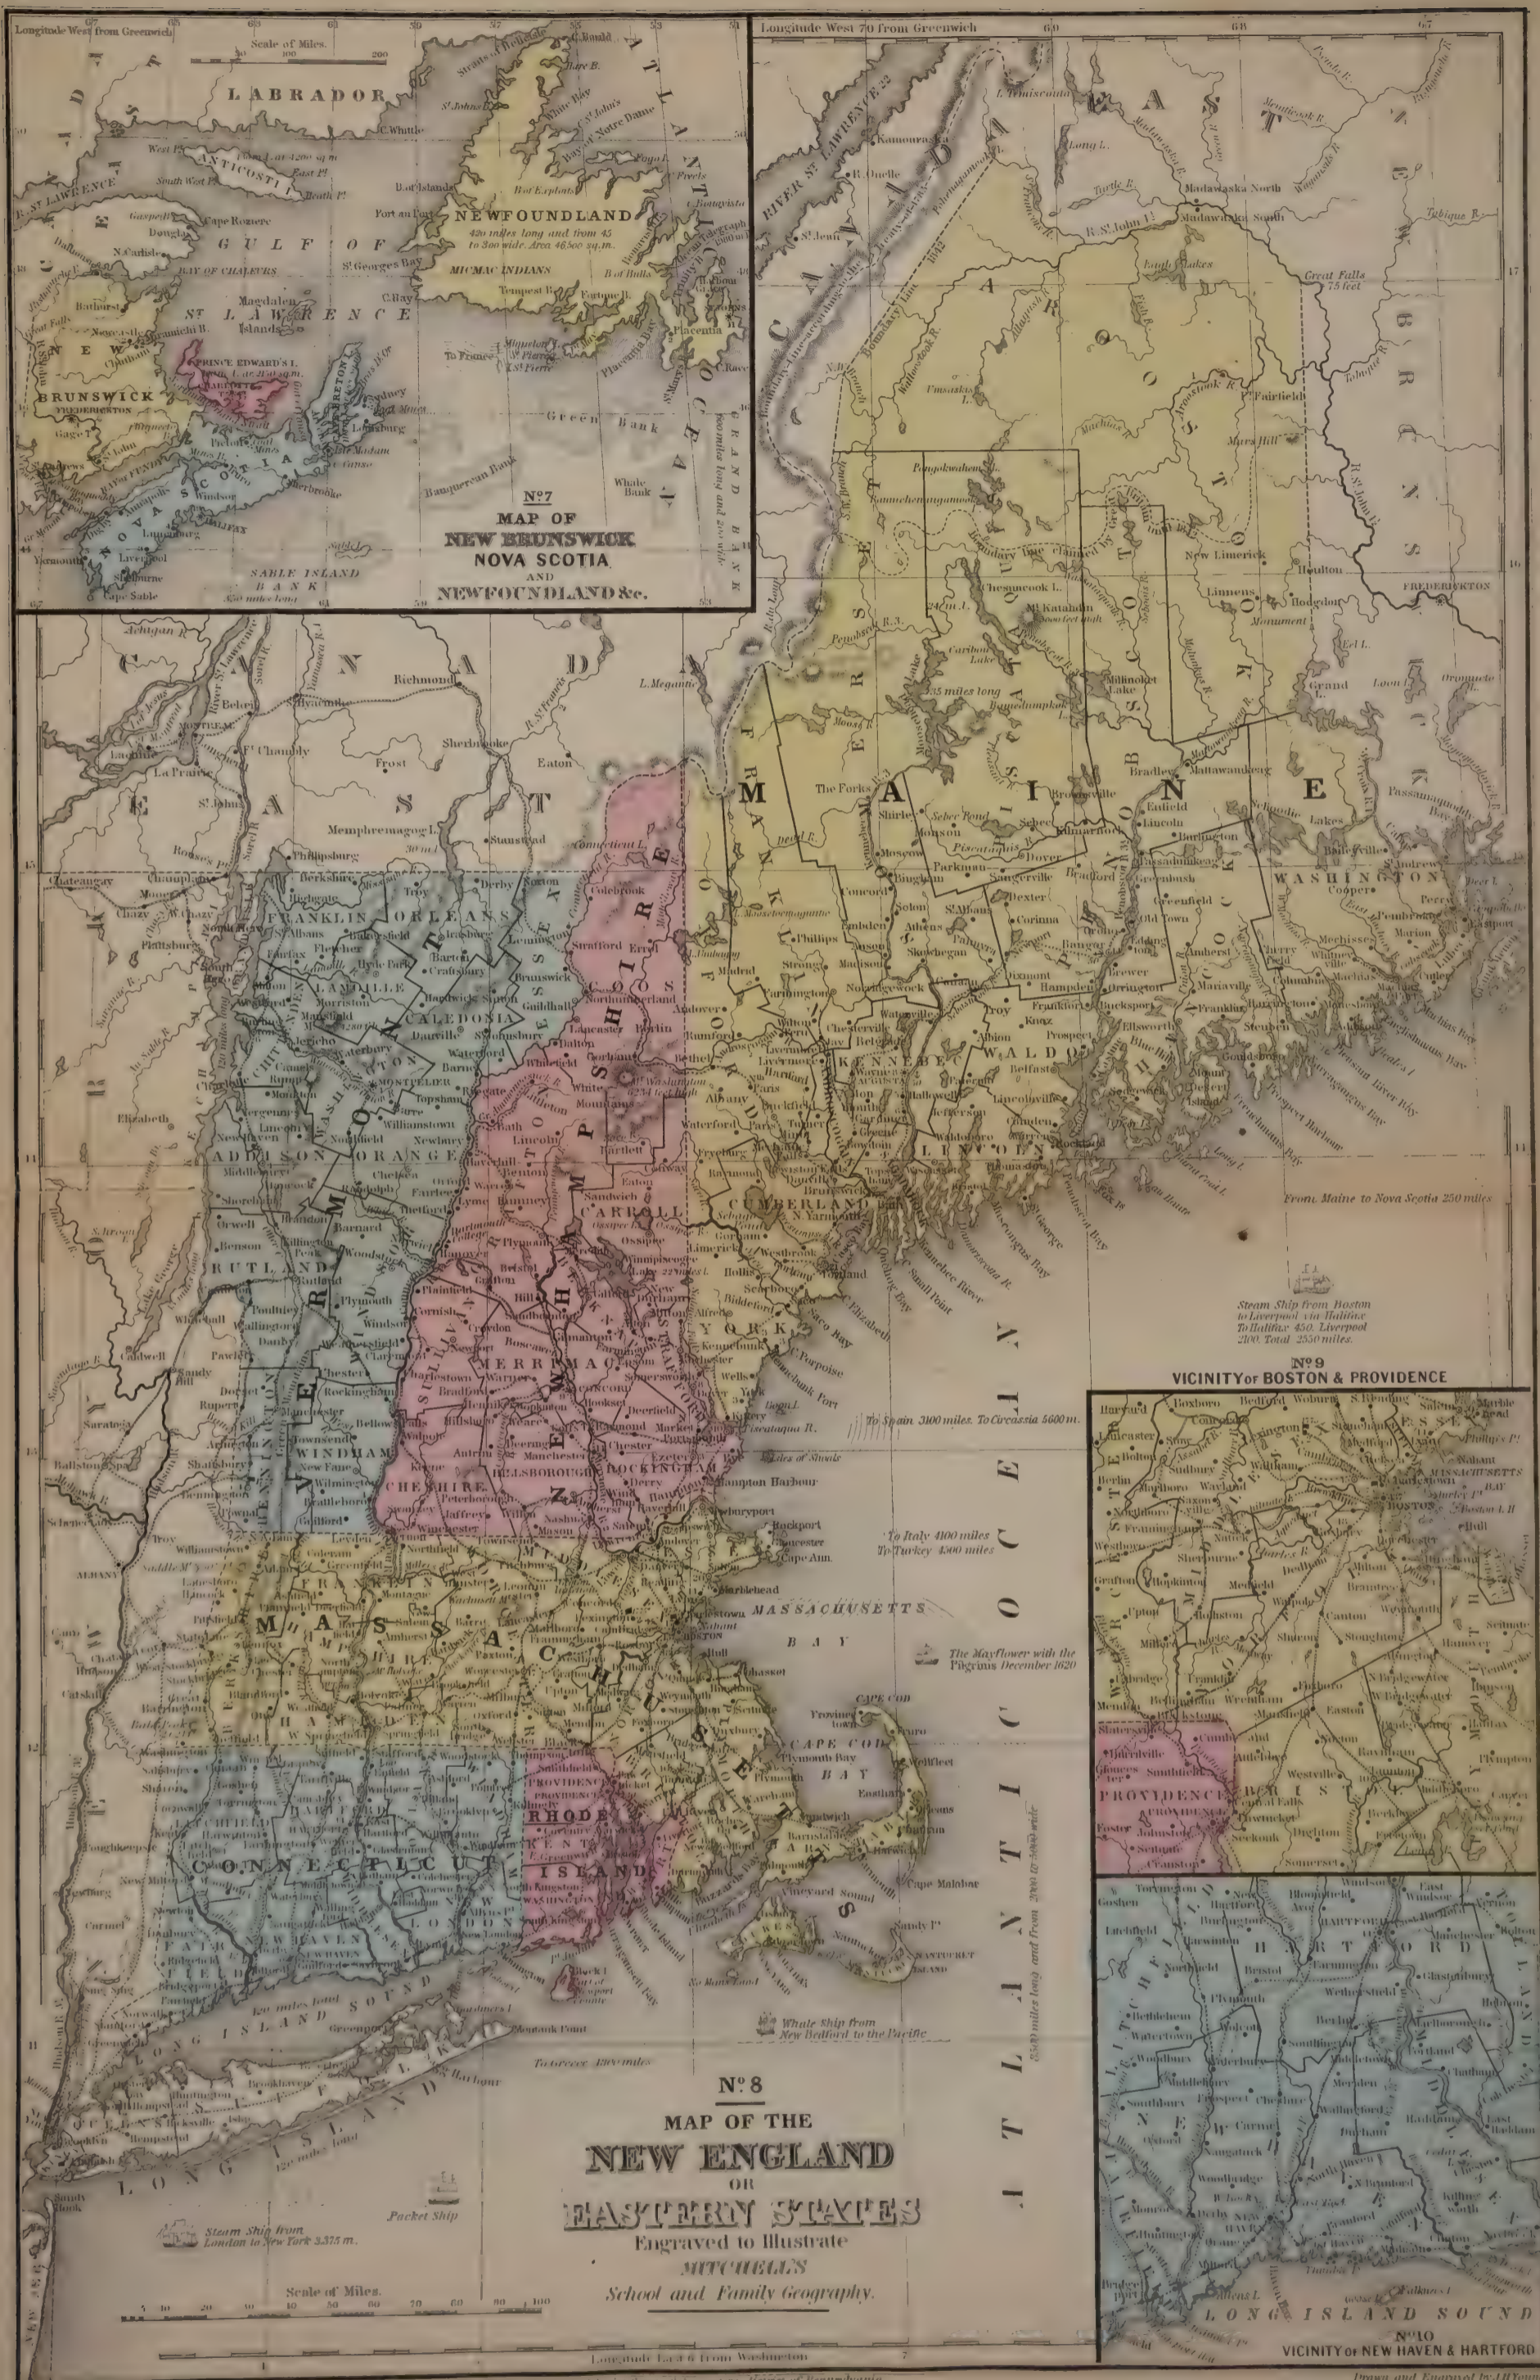

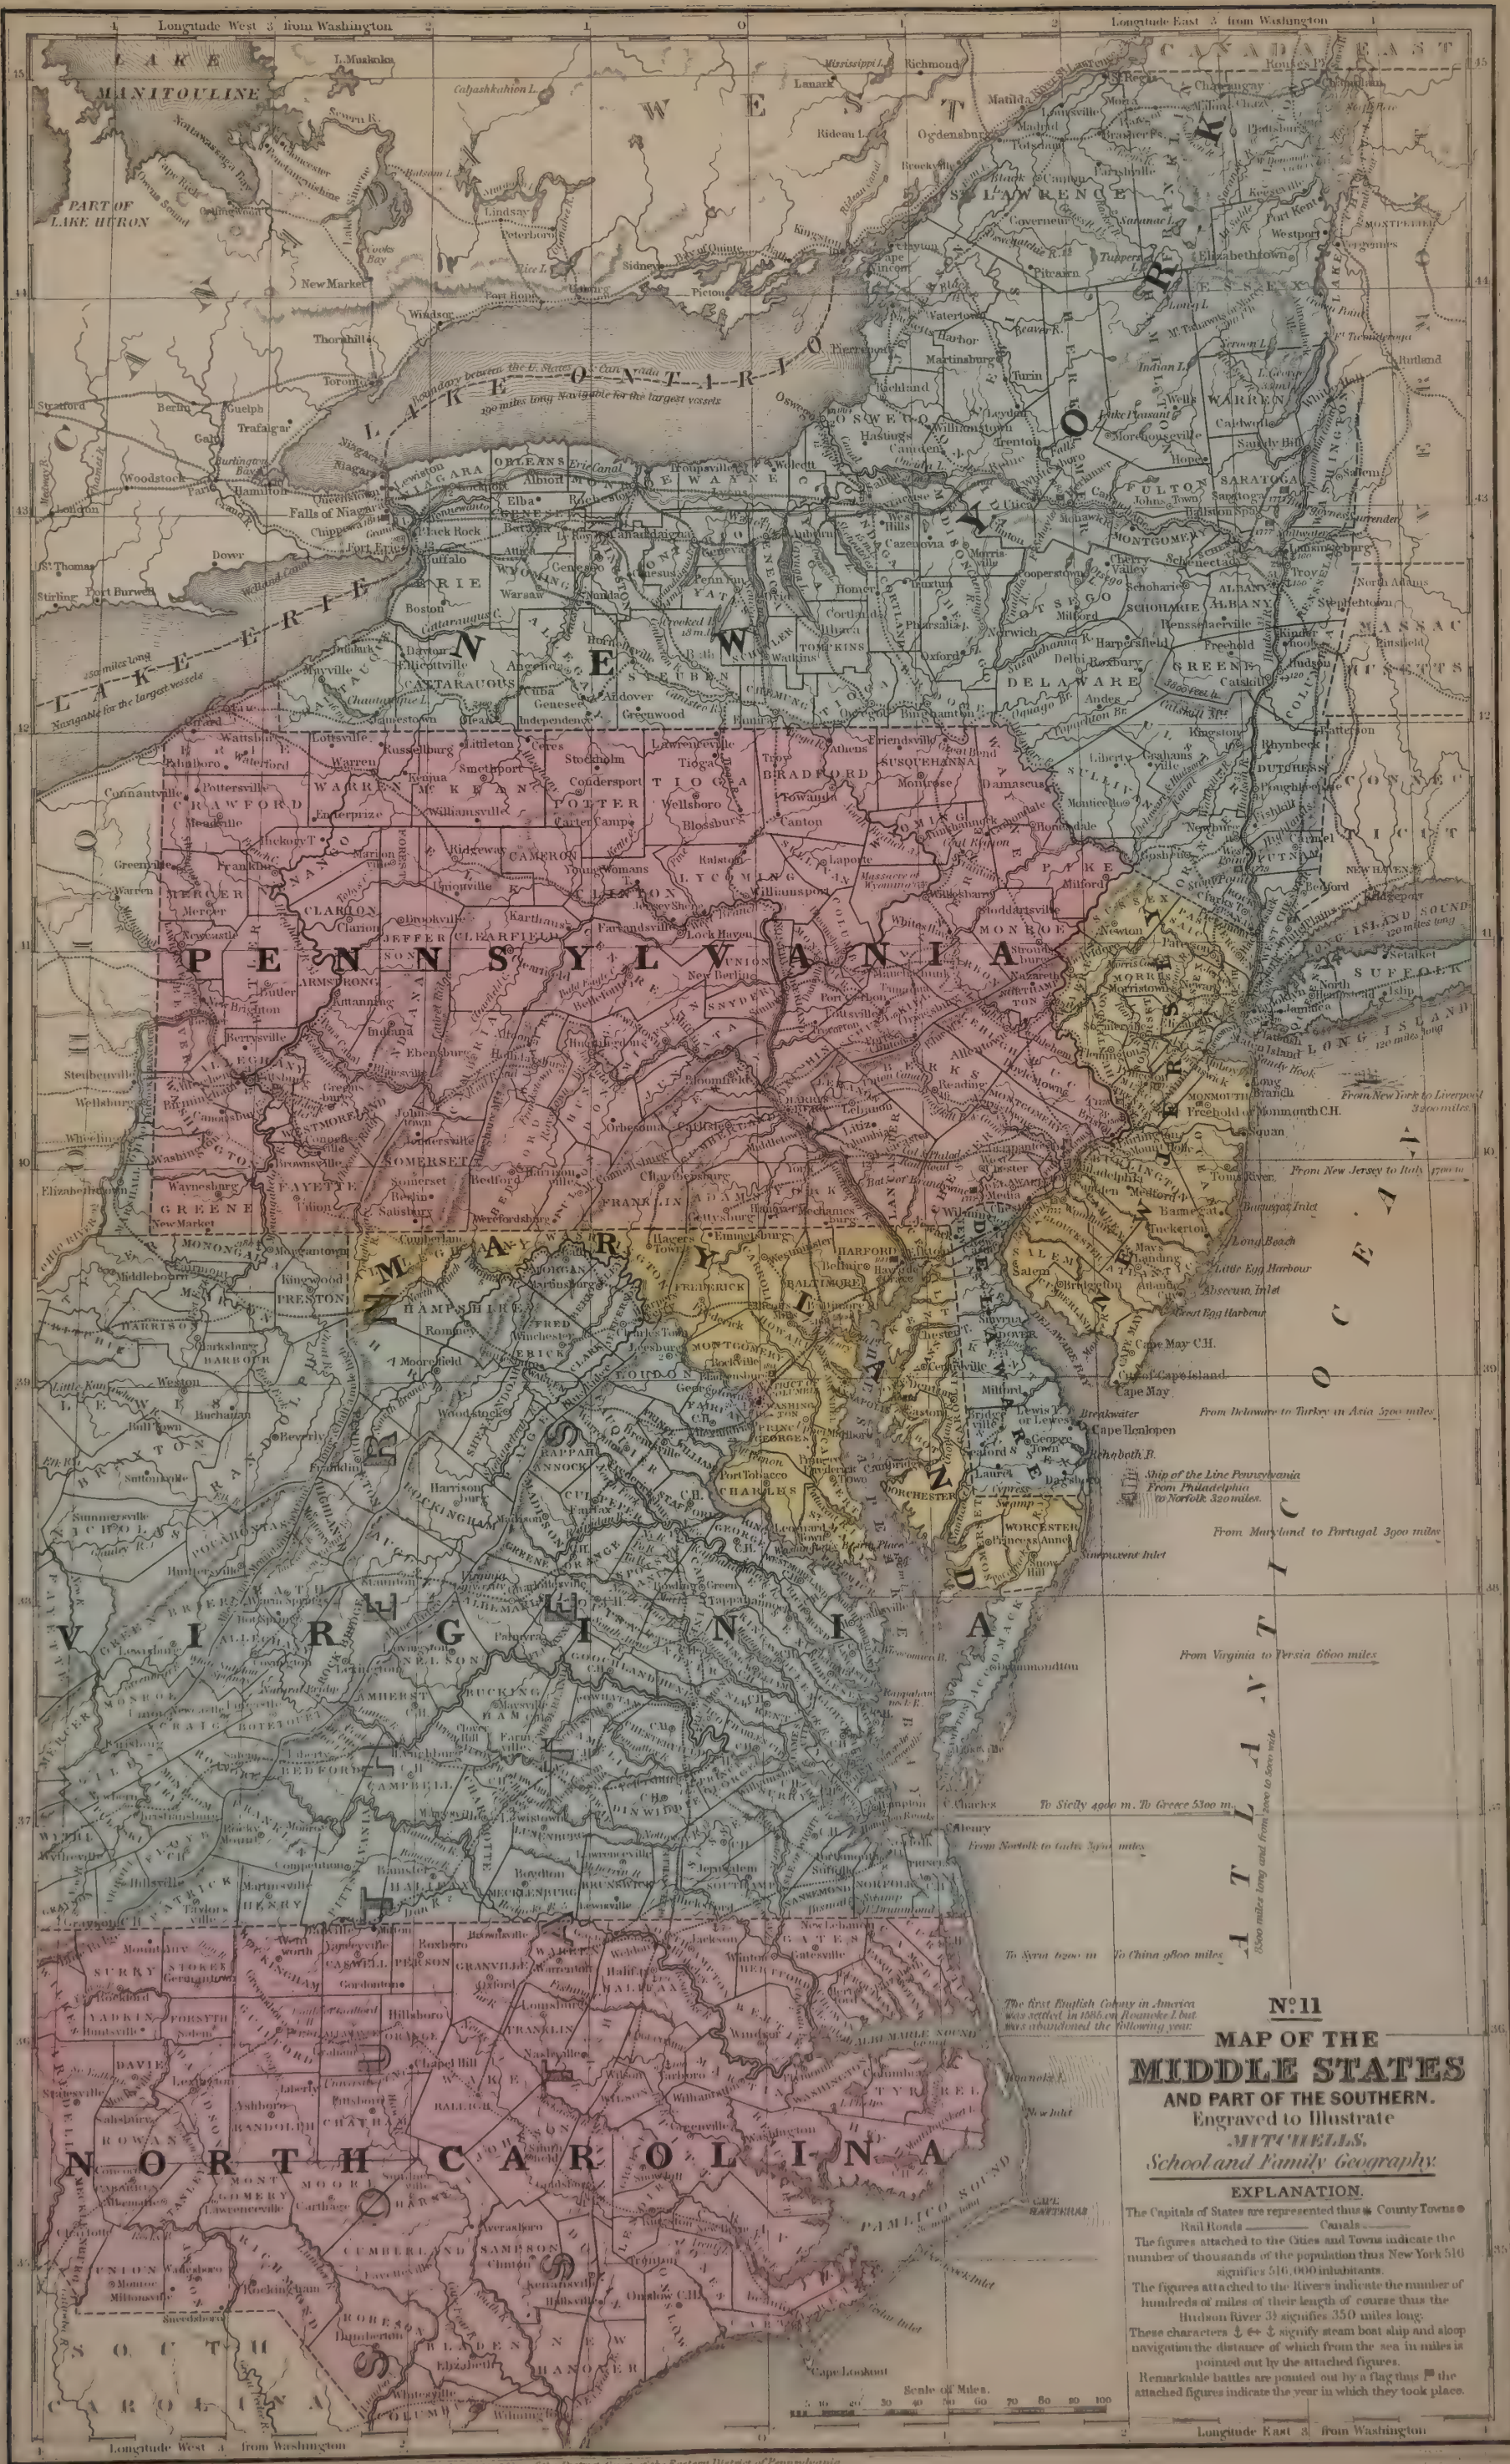

Entered according to Act of Congress in the year 1856 by S. Augustus Mitchell, in the clerk's office of the District Court of the Eastern District of Pennsylvania.  
Drawn and Engraved by G. H. Young

**EXPLANATION.**  
The Capitals of States are represented thus: County Towns   
Rail Roads Canals   
The figures attached to the Cities and Towns indicate the number of thousands of the population thus New Orleans 133 signifies 133,000 inhabitants.  
The figures attached to the Rivers indicate the number of hundreds of miles of their length of course thus the Mississippi River 28 signifies 2800 miles long.  
These characters signify steam boat ship and sloop navigation the distance of which from the sea in miles is pointed out by the attached figures.  
Remarkable battles are pointed out by a flag thus the attached figures indicate the year in which they took place.

The Mississippi river is 2900 and the Missouri 2900 miles in length. The Missouri though considered a tributary is properly the main river, it joins the Mississippi 1800 miles from the sea, and forms a continuous stream 400 miles long.

## **REMARKS.**

The West Indies comprise the Great Antilles, the Little Antilles, the Bahama Islands, and the Caribbean Islands. The Great Antilles are Cuba, Hayti, Jamaica, and Porto Rico. The Little Antilles lie along the coast of Venezuela; of these, Curacao and Margarita are the largest. The Bahama Islands lie north of Cuba and Hayti, comprising Abaco, Eleuthera, Guadalupe, and others. The Caribbean Islands extend from Porto Rico to Trinidad, including the latter. Those which lie north of latitude 13° are called the Leeward, and those south the Windward Is.

Entered according to Act of Congress, in the year 1888, by S. Augustus Mitchell, in the Clerk's Office of the District Court of the Eastern District of Pennsylvania.

Drawn by J. R. Young. Engraved by E. Young.

**MAP OF AFRICA**  
Engraved to Illustrate  
**MITCHELL'S**  
School and Family Geography.

Nº 28

Scale of Miles  
0 100 200 300 400 500 600 700 800 900 1000

In the year 1825 the late Emperor Napoleon I. was brought to St. Helena. In 1821 he died and was buried there. In 1840 his remains were conveyed to France.

The Republic of Liberia extends along the west coast of Africa from the latitudes river 420 miles N.E. to the San Pedro with an average breadth island of 40 miles comprising an area of 16,000 square miles. It includes Liberia Proper and Maryland and other in Liberia. The innumerable population is about 400,000 and the native 100,000; the latter can assist of various tribes of which the Fays or Fays, Fays, Fays, Fays, and Fays men are the chief.

(Oct., 1885, 20,000)

## BOSTON PUBLIC LIBRARY.

One volume allowed at a time, and obtained only by card; to be kept 14 days (or seven days in the case of fiction and juvenile books published within one year,) without fine; not to be renewed; to be reclaimed by messenger after 21 days, who will collect 20 cents besides fine of 2 cents a day, including Sundays and holidays; not to be lent out of the borrower's household, and not to be transferred; to be returned at this Hall. Borrowers finding this book mutilated or unwarrantably defaced, are expected to report it; and also any undue delay in the delivery of books.

\*.\*No claim can be established because of the failure of any notice, to or from the Library, through the mail.

The record below must not be made or altered by borrower.
